vodafone

Remote communications & monitoring

Simple, secure communication to and from remote sites. Low-cost monitoring systems for use any time, any place, anywhere.

Nokia PremiCell

Everything a fixed line offers – with no wires

When a fixed line is just too fixed, take the Nokia PremiCell wherever you go, connect it to the mains and a traditional phone – and you'll be in touch. It's ideal as a telephone, fax and data system for the mobile office, lorry cab, ship or yacht. You can take the same number with you wherever you go. It's ideal for setting up systems such as alarms or telephone and fax before you have had fixed lines installed.

PremiCell enables companies to take advantage of preferential Vodafone-to-Vodafone call rates, which are significantly lower than landline to mobile charges, by providing a connection between an office phone system and Vodafone mobiles.

Pedagog OCTV

A versatile, wireless surveillance solution

Easy-to-install and flexible in operation, Open Circuit Television is the ideal choice for your surveillance and remote site and process monitoring. It's been developed in collaboration with UK police forces and can be relied on to provide 'evidential video quality' with full traceability and security of images using unique tagging and encryption systems.

OCTV exploits the latest video technology and transmits across the GSM network – which means you're liberated from the costs and constraints of dedicated cabling, but still benefit from monitoring, transmission, and telemetry control.
